

# Value Proposition

**For** leaders at tech-forward companies,

**Who** face the problem of:

- Slow, difficult access to customer, product, market data
- Understanding what to do with the data, the 'so what'

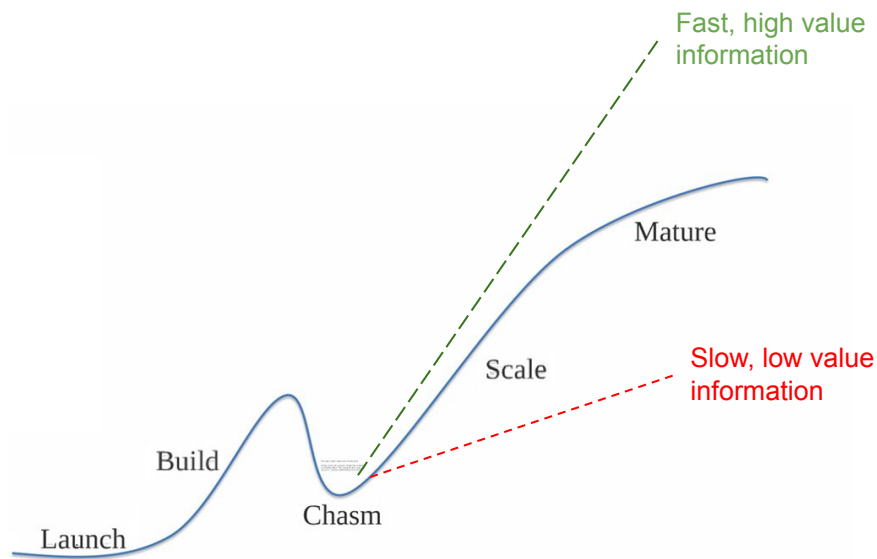

**We are** a data intelligence platform that

- CXO saves x hours / month
- Team saves x hours / month
- Improved mission / revenue critical decisions

**By**

- Surfacing valuable insights 10x faster
- Designing for an exec-first experience vs an analyst-first
- Making data integration & management easy

**Unlike** your current workflow, which takes 20+hrs for leaders + team members per month to research for potentially low quality decisions. Expect ~2hrs for higher quality decisions.

# Product overview

Set direction

Integrate w/data  
effortlessly

Quickly scan key  
metrics, anytime,  
anywhere

Deep dive via analysis  
& synthesis to answer  
the 'So what?'

Align w/team &  
Decide

### Tell me about yourself

Example:

I am a Product Manager. I want to increase user engagement so that we can achieve our business objectives.

I am a

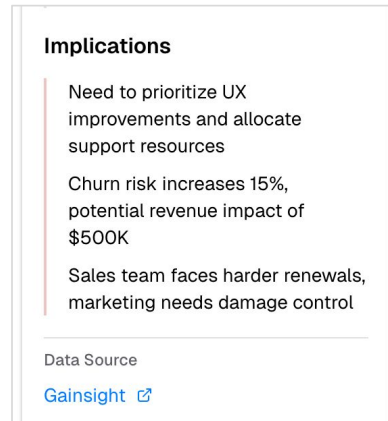

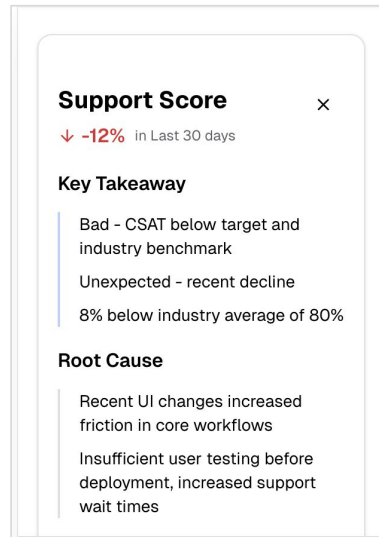

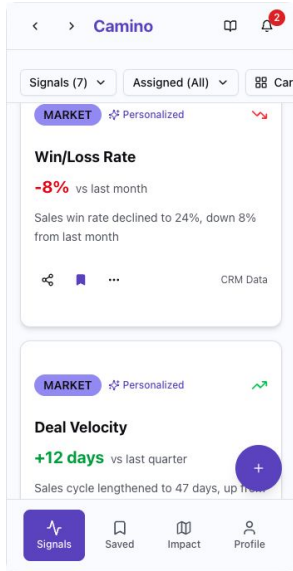

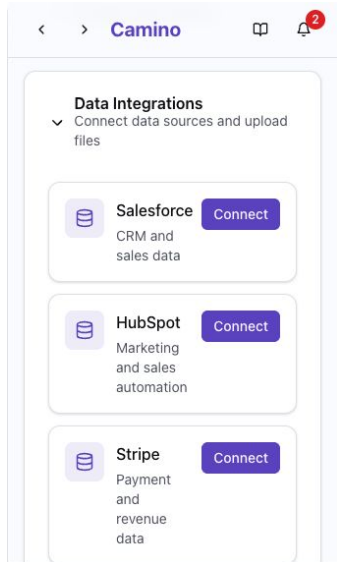

Founder

I want to

Increase user engagement

So that

we can scale sustainably

# Validated user problems

|   | Problem                                                                                                                                                | Importance (0/10)                                                                                  | Current satisfaction (0/10)                                                                                   |
|---|--------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| + | 1 You finding what's important <br>E.g key data and reports in tools. | 10/10<br>Talk about in meetings                                                                    | 2/10<br>Working on it. Building dashboards. Engaging consultants.                                             |
|   | Cost of team time to access the information. E.g. hours per week to produce reports.                                                                   | Made it a weekly priority. Reporting capabilities aren't good. Too much time manually doing stuff, | 1.5/10<br>Really unhappy with data!                                                                           |
|   | Knowing the 'so what' once you have the information.<br>E.g. <u>how</u> does this affect our KPIs?                                                     | 10/10<br>Without so what, it's just a number                                                       | 1.5/10<br><u>Team</u> is struggling to <u>explain the so what</u> . Not enough iterations of training cycles, |
|   | Prioritising/aligning the team to what's important.<br>E.g company KPIs.                                                                               | Creating role based KPIs. One of <u>biggest</u> priorities. 9/10                                   | Very low. 1.5/10                                                                                              |
